Summary

B.Tech first-year Computer Science student building backend and Linux-based systems, seeking an internship.

Projects

Spreadsheet Engine *Python* | GitHub

- Built a spreadsheet engine with cell storage, formula evaluation, and dependency tracking.
- Used Python's `ast` module to parse and evaluate cell formulas.
- Implemented circular-reference detection and dependency-driven recalculation.
- Added JSON and CSV persistence for saving and loading spreadsheets.

CYBERGUARD *Hackathon team project* | GitHub

- Contributed to the architecture and DevOps of a threat-intelligence platform with a URL analyzer that screens URLs locally against a dataset of 2M+ records.
- Deployed a local multi-model pipeline combining Laya, a decision-oriented model, with Qwen 8B for natural-language contextual analysis.
- Helped design a risk-analysis workflow that separates structured risk decisions from LLM-generated explanations.
- Exposed the locally hosted application through Cloudflare Tunnel, running on a laptop with 16 GB RAM and 6 GB VRAM.

Technical Skills

Language: Python

Backend: FastAPI, REST APIs

Database: PostgreSQL, Redis, pgvector

DevOps: Linux, Git, Docker

AI: LLM APIs, RAG (retrieval-augmented generation), prompt engineering, AI-assisted development

Education

B.Tech in Computer Science Expected graduation: [YEAR 2030]

Gandhi Institute for Education and Technology, Baniatangi, Bhubaneswar, Odisha
